Career Objective

Looking for a challenging role in a reputable organization to utilize my technical, database, and management skills for the growth of the organization as well as to enhance my knowledge about new and emerging trends in the IT sector.

FEB. 2021 – TILL NOW

Cyber Infrastructure (P) Ltd, Indore

Software Developer/ Full stack developer

PROJECTS:

Advisory – The Project will allow a user to set up his company profile and his own profile and act as a searcher(user) or as an advisor (or both, user and advisor). The main features will be, searching through the database of advisors based on skills or keywords. It has the ability to request a meeting or request for an advisory connection where the advisor will appear on the app as a connected advisor to the user. I have used Laravel for backend and Vue.js for frontend. We used a MySQL database to manage storage. We have implemented the API Setup.

Nureuka – The project has developed a free smartphone app that contains games and questionnaires which smartphone users can download, play and complete on their phone.. I have used Laravel for backend and Vue.js for frontend. We used a MySQL database to manage storage. We have implemented the API Setup.

Lux-Pay – The project has developed to exchange USD to BTC Cryptocurrency. I have used Crypto.io APIS to exchange the USD. I have used codeigniter for backend and frontend. We used a MySQL database to manage storage. We have implemented the API Setup.

HealthCare: This project is based on managing all the daily activities of the hospital. It has four main actors or modules like Admin and User. I have used laravel for backend and html and javascript for frontend . We used a MySQL database to manage storage.

Tyrios – This project is like an ecommerce site where you can add products and sell them. I have written code for crud operations for this project. I have used PHP for backend and Angular js for frontend . We used a MySQL database to manage storage.

SEP. 2019– FEB 2021

Globussoft Technologies, Bangalore

Software Developer/ Full stack developer

PROJECTS:

My schooling: This project is based on tracking all the daily activities of School. It has four main actors or modules like Super Admin, Admin, Parents, Teacher and Student. I have worked on super admin, admin and teacher; in this, I have worked on frontend and backend, where I wrote code in Laravel for backend and html, CSS, jQuery, JavaScript for frontend. We used a MySQL database to manage storage. In the teacher module teacher, attendance can be filled and given homework to students and it evaluates homework. In this project the teacher can generate student reports.

Emp monitor: This project is an employee tracking system. Admin manages employee system data and admin can see employee work through screen shots. This project has some other features also there like blocking domain, project management. I wrote code Node Js for backend and php for frontend. I have written code in JavaScript, JQuery, Laravel for frontend.

Kwik Funnels: It is an ecommerce website project where users can place an order. I have worked on the payment integration part, I wrote code in core php for 2 checkout payment gateway.
